

DBLogix

DEMINERALIZED BONE MATRIX

Back on Track

DBLogix™ is a demineralized bone matrix paste derived from 100% allograft bone.

DBLogix™ exhibits the essential elements of bone formation. It does not contain any extrinsic carriers and is entirely derived from 100% allograft bone. The product is provided in a ready to use syringe.

Indicated for use as a bone void filler for the treatment of surgically created or traumatic skeletal defects that are not intrinsic to the stability of the bony structure.

DBLogix™ may be used in surgical procedures including:

- Spine
- Neuro
- Orthopedics
- Trauma
- Reconstruction
- Foot & Ankle

PRODUCT FEATURES:

- Osteoinductive – each lot is assayed
- Osteoconductive
- 100% bone – no additional carrier
- Bio-compatible
- Shelf life up to two years
- Quality control tested for cohesiveness, malleability, and flowability
